

short, Applied SAFe allows you to extend or modify all of its content in order to better reflect the specific requirements of your organisation.

Applied SAFe can further include and ensure compliance with various reference models like CMMI, AS9100, CTR-180 (FDA), IEC 62304, ISO 13485 or your own company specific references models. If you do not want to do this customization by yourself, we will help you to adapt the standard process implementation to your needs.

The process model is implemented in a way that you can instantiate independently on each level as on portfolio, program and team. This enables you for example to run multiple programs each with its own process instances (respectively variations thereof), whilst each program holds various instances on a team level with various tailored instances of life cycles. - Applied SAFe is implemented with the process management tool 'Stages' (by Method Park Software AG) ; this solution offers a great flexibility and efficiency while still maintaining control and compliance of portfolio, programs and teams.

"With Applied SAFe® implemented in Stages our clients can integrate agile practices into their own process landscape. Even large organizations can now safely become more agile without having to start from scratch."

Erich Meier, CTO
Method Park Software AG

Applied SAFe is capable of making use of various life cycle models. As proposed by SAFe, teams can run with Scrum as an agile method; additionally it is possible to coexist with other life cycles and to synchronize via the *Agile Release Train*. Teams can choose their life cycle depending on their needs and their agile readiness. This solution has the advantage to let some teams smoothly adopt Agile, while other teams could choose other life cycles to work with; such as for example the V-Model, Disciplined Agile Delivery (DAD), iterative or waterfall.

The synchronization of the teams within one program is achieved through the *Agile Release Train* mechanisms as proposed by the framework's creator, Dean Leffingwell.

For further information or requesting an online web-presentation please visit our website on www.appliedSAFe.com or get in contact with us on appliedSAFe@pedco.eu.

Public webinar on Applied SAFe on May 7th 2015

You're invited to join a special webinar in which we will present a solution that helps bring agility to complex organizations. Learn how to introduce tried and tested practices and show how complex development processes can indeed be agile. With a predefined model in a system to manage and provide the right context; your organization can now take full advantage of the velocity agile methods bring.

Join this session to see how the Scaled Agile framework empowered by the Stages process management system supports your teams to become agile.

When: May 7th 10:00AM EST

Where: Online
