

**AGILE & DEVOPS FITNESS CHECK**

**Assessment of your Agile & DevOps implementation**

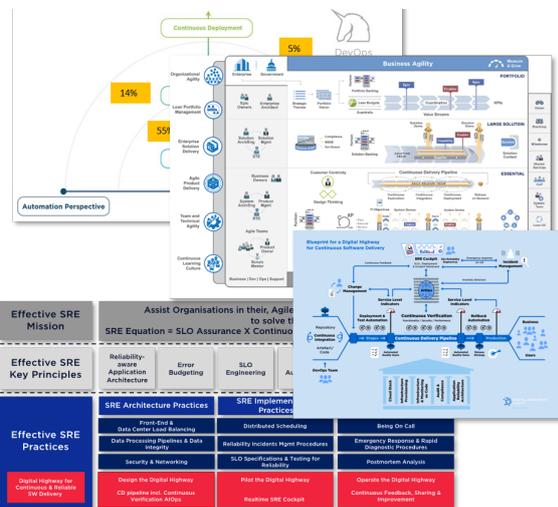

With our Agile & DevOps Fitness Check we check and evaluate your current Agile and DevOps implementation. In a first step we collect your special point of interests and analyse your landscape accordingly. The result is a detailed report that also includes any weaknesses or opportunities for improvement in your implementation.

With our service, you ensure that your implementation, including mindset & principles, organizational structure, processes, roles, work products, tailoring, diversity and also the handling of process information as a whole, are assessed in a structured and independent manner. We build on our experience and we created together with our partner Digital Architects an **Agile & DevOps Target Capability Model** (picture below) which will be used during the fitness check and provided to you as a working model. The report concludes with a concrete statement, assessment and possible improvements for your implementation landscape.

**PEDCO**, with its extensive experience in Agile and DevOps, and Digital Architects Zurich, leveraging their knowledge for CI/CD, AIOps and SRE, jointly developed the "Agile & DevOps Fitness Check". This assessment methodology is using market best-practices and expert knowledge to identify challenges in companies' digital and agile transformation journeys.

**Deliverables and Procedure**

- In a first interview, the content of the assessment is individualised, and focus areas are defined, starting point is our existing Agile & DevOps assesment questionnaire.
- We work with existing self assessments and other existing metrics. e.g. pipeline efficiency, Business Agility Self Assessment, DevOps Self Assessment etc.
- Given the opportunity, we perform Gemba Sessions - Observations of events like PI Plannings, I&A, Retros, System Demos etc.
- Individual interviews with key roles (e.g. Agile Team, RTE, PM, PO, Architects, STE, Shared Services,..)
- Conduct a SWOT analysis of the existing implementation, structure, process, governance and compliance assets.
- Develop concrete proposals for improving the current situation.
- Final written report and presentation of the results based on concrete findings.

Agile & DevOps Transformation Targeted Capability Level				
Level 0	Level 1	Level 2	Level 3	Level 4
Pre-Agile/ Waterfall	Continuous Integration	Continuous Delivery	Continuous Deployment	Agile Product Delivery

**Benefits**

- An independent assessment will help you to determine any deficiencies in the current implementation.
- Interviews can be held in German, French and English. Report and presentation will be provided in English or German.
- Ideally, you will have the certainty that your company is at the cutting edge of Agile and DevOps implementation and that there is nothing more to be done.
- A quick and brief assessment will help you to determine where you stand.
- The assessment has fixed costs and a defined end.
- Since we are the provider of Applied SAFe, we know what it takes to establish scaled agility in large-scale, complex and even regulated environments.
- You will receive an assessment of your agile implementation within a short time. A fitness check is normally completed within 3-8 weeks, depending on the availability of the interview partners, performed Gemba Sessions and the complexity of the fitness check.

**Cost**

- An Agile Fitness Check starts at a flat rate of CHF 45,000, excluding VAT. For larger endeavors, we will offer a recommended procedure with a dedicated fix price.

We work with your real world artefacts and base our opinion on given facts. Our work is based on our own Agile & DevOps Target Capability Model and we use existing assessments (e.g. from SAFe, the Scaled Agile Framework).

**Sample Deliverables**

Please find below some examples of documents used and created from various past fitness checks. We specifically name individual points based on our assessment.

Reports and documentation can be delivered in English or German, Interviews workshops can be held in English, German or French.
